- RAM32GB (2x16GB) DDR5 5600 PRC

- RAM64GB (2x32GB) DDR5 5600

**NOTE:** Memory speed 5600 MT/ s can be achieved via two SODIMMs per channel (2DPC) when populated with the same part number.

For systems configured with more than 3 GB of memory and a 32-bit operating system, all memory may not be available due to system resource requirements. Addressing memory above 4 GB requires a 64-bit operating system. Memory modules support data transfer rates up to 2400 MT/s; actual data rate is determined by the system's configured processor. See processor specifications for supported memory data rate.
CAUTION: You must shut down the Retail System and disconnect the power cord before adding or removing memory modules. Regardless of the power-on state, voltage is always supplied to the memory modules as long as the Retail System is plugged in to an active AC outlet. Adding or removing memory modules while voltage is present may cause
irreparable damage to the memory modules or system board.

**Notes:**
NIC Fundamentals:
By default, the HP BIOS set the HUB WOLsetting to disabled state, which will not allow wake signal from the USB bus to  initiate a wake event. On Engage One Plus, the Embedded Lan Controller is enabled by default and is what HP recommend  using as the primary nic for WOLcapability as seen in the BIOS F10 menu If customer has a reason to use the HUB NICand  wants to wake the system from that NIC. They must enable wake events for the HUB to get the functionality.
*Wireless access point and Internet service required and not included. Availability of public wireless access points limited.
The specifications for the 802.11ax WLAN are draft specifications and are not final. If the final specifications differ from
the draft specifications, it may affect the ability of the PCto communicate with 802.11ax WLAN devices. Wi-Fi 6 requires a  wireless router, sold separately, that supports 802.11ax (Wi-Fi 6). Only available in countries where 802.11ax is supported.

[1] Wi-Fi 7 (802.11be) WFA certification is not yet available. Intel® Wi-Fi 7 BE200 module will be delivered as a pre-certified solution.

[2] Name and features might change based on Bluetooth® SIG direction

[3] "5 Gbps Wi-Fi 7 2x2 client speed" - is based on the current draft of the 802.11be specification, which specifies the theoretical maximum data rate for  a 2x2 device that supports 320 MHz channels in the 6GHz band, with a 4096 QAM modulation is 5.76 Gbps. Based on an industry-standard  efficiency assumption, the resulting estimated maximum over-the-air 2x2 client UDP throughput speed would be 5 Gbps

[4] "2.4X higher peak data rates" Intel® Wi-Fi, 7 BE200 claims, are based on the comparison of the expected maximum theoretical data rates for similarly  configured single radio Wi-Fi 7 (802.11be) and standard Wi-Fi 6 (802.11ax) Wi-Fi solutions as documented in current IEEE 802.11be spec and IEEE
802.11 wireless standard specifications, and require the use of similarly configured 802.11be wireless network routers.

[5] Intel® vPro® Technology is sophisticated and requires setup and activation. Availability of features and results will depend upon the setup and  configuration of your hardware, software, and IT environment. To learn more, visit: http://www.intel.com/technology/vpro.

[6] Support of Wi-Fi Alliance certifications is OS-dependent.

[7] IEEE 802.11az hardware readiness per expected Wi-Fi Location R2 feature support and based on draft 2.1 of the IEEE802.11az amendment and is  subject to change.

[8] Some security solutions may not be supported by your device operating system and/or by your device manufacturer or may require additional  hardware (e.g., UICC – SIM card). Check with your device manufacturer for details on availability.

## MISCELLANEOUS FEATURES

### Management Features

- Advanced Configuration and Power Management Interface (ACPI). Allows the system to wake from a low power mode.
- Controls system power consumption, making it possible to place individual cards and peripherals in a low-power or powered-off state without affecting other elements of the system.
- Intel® Wired for Management support; industry wide initiative to make Intel® architecture based PCs, servers and mobile computers more inherently manageable out-of-the-box and over the network
- Dual State Power Button; acts as both an on/off button and a suspend-to-sleep button

### HP Point of Sale Diagnostics UEFI:

- This utility enables hardware level testing outside the operating system on many components. The diagnostics can be invoked by pressing F2 at POST, and is available as a download from HP Support

### Serviceability Features:

- System/Emergency ROM
- Flash ROM
- Flash Recovery with Video Configuration Record Software
- Over-Temp Warning on Screen (Requires IM Agents)
- Clear Password Jumper
- Clear CMOS Button
- Color coordinated cables and connectors
- Front power switch
- System memory can be upgraded without removing the system board or any internal components

### Interpreting System Validation Diagnostic Front Panel LEDs and Audible Codes

During the system validation phase that occurs at system startup, the BIOS validates the functionality of the following subsystems and conditions:

- AC adapter
- System board power
- Processor failure
- BIOS corruption
- Memory failure
- Graphics failure
- System board failure
- BIOS authentication failure

If an error is detected, specific patterns of long and short blinks, accompanied by long and short beeps (where applicable) are used to identify the error. These patterns 48esi make up a two part code:

- Major – the category of the error
- Minor – the specific error within the category

**NOTE:** Single beep/blink codes are not used.

## Technical Specifications - Miscellaneous Features

| Number of long beeps/blinks | Error category |
|---|---|
| 1 | Not used |
| 2 | BIOS |
| 3 | Hardware |
| 4 | Thermal |
| 5 | System board |

Patterns of blink/beep codes are determined by using the following parameters:

- 1 second pause occurs after the last major blink.
- 2 second pause occurs after the last minor blink.
- Beep error code sequences occur for the first 5 iterations of the pattern and then stop.
- Blink error code sequences continue until the computer is unplugged or the power button is pressed.

📝 **NOTE:** Not all diagnostic lights and audible codes are available on all models.

The red LED blinks to represent the major error category (long blinks). The white LED blinks to represent the minor error category (short blinks). For example, '3.5' indicates 3 long red blinks and 5 short white blinks to communicate the processor is not detected.

| Category | Major/minor code | Description |
|---|---|---|
| BIOS | 2.2 | The main area (DXE) of BIOS has become corrupted and there is no recovery binary image available. |
| | 2.3 | The embedded controller policy requires the user to enter a key sequence. |

| | 3.3 | The embedded controller has timed out waiting for BIOS to return from graphics initialization. |
| | 3.4 | The system board displays a power failure (crowbar).* |
| | 3.5 | The processor is not detected.* |
| | 3.6 | The processor does not support an enabled feature. |
| Thermal | 4.2 | A processor over temperature condition has been detected.* |
| | 4.3 | An ambient temperature over temperature condition has been detected. |
| | 4.4 | An MXM over temperature condition has been detected. |
| System board | 5.2 | The embedded controller cannot find valid firmware. |
| | 5.3 | The embedded controller has timed out waiting for the BIOS. |
| | 5.4 | The embedded controller has timed out waiting for BIOS to return from system board initialization. |

## Technical Specifications - Miscellaneous Features

| | | |
|---|---|---|
| 5.5 | | The embedded controller rebooted the system after a possible lockup condition had been detected through the use of a System Health Timer, Automated System Recovery Timer, or other |

\* Indicates hardware triggered event; all other events are controlled by the BIOS.
